Rob,

Here is another try. Please add a ".zip" extension to the file. It bounced from your email as well as AQEA.

Thanks,

James

Subject: FFS model transfer

Rob,
I wrote the email below with the intention of sending it along when I shipped the hard drives. Unfortunately we have hit a bit of a snag. The IT folks here assumed that the drives would be used with Linux servers and formatted them with the Linux native EXT4 format. The drives presently have all of the files on them, but they are not readable by Windows. I will have to reformat the drives and re-copy all of the model files to them. I have attached the model codes so that the CPG modeling team can begin to take a look at the updates that have been made.
The files will take another day or two to copy back onto the hard drive. Once copied we will get the drives to AQEA's Montvale office.
Regards,
James
Rob,
I emailed Peter Israelsson, and at his request I have sent the two hard drives with the FFS models to Wen Ku in AQEA's Montvale office. The first drive (4TB drive) has the hydrodynamic and sediment transport and fate and transport code, inputs and outputs on it, the second drive (2TB drive) has the carbon model code, inputs and outputs on it.
Please note that the models were run across an array of servers so paths in the run scripts point to various locations and will have to be edited in order to run the scripts. Some of the scripts have been edited so that they point to the relative path to the appropriate files on the transfer drives.
